CHALLENGE

IDEA

The targets of the NeedTo service are to combat unemployment and provide a launch environment for small businesses. Its corporate activities were repeatedly covered by local media, including FOX.

PROJECT SCOPE

First, we developed a prototype that featured a job-search function, for both skilled and unskilled vacancies. In the final, cloud-deployed version, we needed to incorporate mapping services, payment systems, and social media.

DECISION

SOLUTION

First, we developed a prototype that featured a job-search function, for both skilled and unskilled vacancies. In the final, cloud-deployed version, we needed to incorporate mapping services, payment systems, and social media.

Searching for a job or a contractor in NeedTo is location-based. The system is integrated with statistics, messaging and popular payment systems, such as Stripe and PayPal. At the moment, the average daily number of users is 200.
