RENTFOLIO

Web accounting application for a real estate

PROJECT TEAM

PHP

jQuery

MySQL

KendoUI

Braintree

CHALLENGE

IDEA

The client hired us to develop a service planning the product release to the Australian market and then in other countries, including the UK.

TASK

We were to create a web application with a fee-based real estate accounting functionality.

DECISION

SOLUTION

We completely developed the application, designed and implemented its appearance and functionality, including the admin panel for user moderation and visual content management.

GENERAL FEATURES

- The final product is responsively designed, optimized for all platforms.
- It tracks, slt tracks, stores, and displays accounting statistics.
- The system is integrated with the Braintree payment system.
- The graphics is stored in the Amazon S3 cloud storage.
- We worked closely with the client, constantly receiving new ideas.
- We'be created a focus group to check all ideas on the fly.
